VIEWCAST VIDEO CAPTURE CARDS

The Osprey-100: Basic Video Capture

When it comes to streaming video, the Osprey-100 captures it all.

If you've seen live video on the Internet, chances are Osprey cards were doing the streaming. Osprey captures TV-quality video and displays it uncompressed at 30 fps. It's the card of choice for Internet/intranet streaming video, videoconferencing, movie-making, web cams, and a host of other digital video applications. Osprey is the one video capture card that can do all of this:

- Enable multiple cards to be used to stream multiple video sources on a single workstation
- Support most popular video APIs
- Run on multiple computing platforms and operating systems
- Enable users to plug in any standard video source - such as a VCR, camera or camcorder - and view crisp, TV-quality video on a PC

Prime-Time Video Streaming

Think that low-cost Internet/intranet video isn't ready for prime time? Wake up and watch your competitor's video stream. Tens of thousands of Osprey cards have been sold, easily installed, and put to work for a wide range of applications.
